EDUCATION

Saveetha School of Engineering, Chennai Expected Graduation: May 2028
Bachelor of Engineering, Computer Science (Artificial Intelligence) CGPA: 9.22 / 10
Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C, SQL
Frontend: React, Next.js (App Router), HTML, CSS, Tailwind CSS
Backend and APIs: Node.js, Express.js, FastAPI, REST APIs, Microservices Architecture
Databases: MongoDB (Mongoose), SQL
Cloud and Tools: Google Cloud Platform, Vercel, Git, GitHub, VS Code, Android Studio
AI / ML: MobileNet, KNN, LangChain, Google Gemini API

EXPERIENCE

Founding Software Engineer — Lin's InfoTech (AI Solutions Startup) December 2024 – Present
Chennai, India | linsinfotech.in | *Next.js, TypeScript, Node.js, Express.js, Python, FastAPI, MongoDB*

- Architected and shipped the company platform as a three-layer microservices application separating a Next.js client, a Node.js/Express REST API and an isolated Python/FastAPI service, so each layer deploys independently.
- Implemented an Express API gateway that authenticates and proxies AI requests to the FastAPI microservice, keeping the LLM service and API credentials off the public surface.
- Built REST modules for authentication, session handling and lead capture on Mongoose schemas for MongoDB CRUD; hardened the backend with Helmet, a scoped CORS policy and request rate limiting.
- Integrated LangChain with the Google Gemini API to serve a streaming chatbot and asynchronous document-generation endpoints.
- Deployed the full stack to production on Vercel and own it end to end — architecture decisions, debugging live issues, and dynamic sitemap and metadata generation.

PROJECTS

Apex Engineering — Production B2B Web Platform apexengineering.org.in
Next.js App Router, React, TypeScript, Vercel

- Engineered 62 statically generated routes, including dynamic product and blog routes, served from Vercel's edge network to minimise time to first byte.
- Optimized client-side JavaScript by hydrating React only where components are interactive, keeping static pages fully pre-rendered.
- Implemented server-side metadata generation, automated canonical URLs, dynamic XML sitemap generation and a reusable client-side filter over 20+ FAQ records.

Nexacro — AI Acrosome Intactness Analysis Platform nexacro.in
Python, React.js, MongoDB, Android Studio

- Developed a machine learning classification system distinguishing acrosome-intact from damaged sperm cells, automating a manual laboratory assessment.
- Built web and Android clients against a shared backend so a single analysis service supports both platforms.

Laundex — Laundry Management Web Application laundex.in
React, JavaScript, MongoDB

- Designed and shipped a full-stack booking and order-tracking system for hostel laundry operations, with a responsive mobile-first UI.

RESEARCH

IEEE Conference Paper, ICFTS 2025 — Published in IEEE Xplore2025

- Parkinson's disease screening from spiral hand sketches using MobileNet with KNN classification; achieved over 92% accuracy.

LEADERSHIP AND ACHIEVEMENTS

Vice President, Google Developer Group SIMATS 2025 – Present

- Ran technical workshops on Cloud, Flutter and TensorFlow; mentored students through hackathons and coding events.

Research and Innovation Lead, Hackathon Club SIMATS 2025 – Present

- Designed real-world problem statements for campus hackathons and mentored student teams through project development.

Innovative Student Ambassador, Institution's Innovation Council (IIC) Mar 2026 – Present

Awards

- 1st Prize, 12-Hour Hackathon — built a tutor–student matching platform with real-time chat and course enrollment (React, Node.js, MongoDB).
- 3rd Prize, 24-Hour Hackathon — built a fake news detection web application integrating external classification APIs (Node.js, MongoDB).
- Best Poster Award, Tech Star Summit; Torch Bearer Award, 2025.
